

NAME: Moe Daif      Your project's topic: Social Media Usage Survey App

List at least three things that your project does well:

It asks very important questions relating to users and their social media use habits.

It has a nice simple layout consisting of 3 pages, those being the Questions page, the first result page, and the second result page based on the user's input.

It has multiple answer input types such as radio groups, drop downs, and text fields.

List at least three things that your project doesn't do as well as it could:

Honestly it's getting better but improvements can always be made.

It could have more answer input types.

It could be prettier in terms of style.

List the names of all the people you talked to about this particular project, and the URLs (or other references) for all the other sources you consulted. For each item, describe the information you got (e.g., How to respond to a button click) and the amount of detail that the information contained (e.g, general idea with no code, about 5 lines of code, about 30 lines of code, etc.).

Dr. Barry A. Burd PhD - Pretty much everything

GeeksForGeeks - radio groups if I forgot how to use them or incorporate them.

Flutter Docs - Using Dr. Burd's material from class and getting refreshers from the flutter docs examples.

Youtube - Inspiration for app design and color schemes.
